2. Taxation

The Income-tax Act, 1961 prescribes that profits and gains of life insurance companies will be the surplus or deficit disclosed by the actuarial valuation made in accordance with the Insurance Act, 1938. The Government of India had set up a committee to suggest revisions in the provisions for taxation of life insurance companies. The Company understands that the committee has submitted its report and it is possible that the existing rules may be modified in the future.

According to Accounting Standard 22 on "Accounting for Taxes on Income" carry forward of losses under tax laws should be recognised as deferred tax asset only to the extent that there is virtual certainty supported by convincing evidence that sufficient taxable income will be available against which deferred tax asset can be realised.

As life insurance business has a long gestation period and in view of the uncertainty, the Company has decided not to recognise deferred tax asset.

3. Actuarial Assumptions

Actuarial liabilities are calculated in accordance with accepted actuarial practice, requirements of Insurance Act, 1938, regulations notified by IRDA and guidance notes issued by the Institute of Actuaries of India with the concurrence of the IRDA.

The gross premium method was used to value the non-linked liabilities in respect of the Individual policies in force at 31st March 2008. The liabilities were determined based on assumptions as to the future experience of the policies. The principal assumptions are related to interest, expenses, mortality and in the case of participating policies, bonuses. The assumptions made were based on prudent estimates of the future experience, and hence include margins for adverse deviations. The interest rates used for the valuation vary according to the type and term of the product, and were in the range from 4.00 to 5.50 per cent (Previous Year: 4.00 to 5.50 per cent). The mortality rates used for assurance benefits were based on the published Indian Assured Lives Mortality (1994-1996) Table. In the case of annuity benefits, it was deemed prudent to use zero mortality rates because of the small number of lives involved.

The Unit Reserves in respect of linked business have been determined on the basis of net asset values of the units allocated to the policyholders as at 31st March 2008. The liability in respect of premiums for which units were yet to be allocated as at 31st March 2008 is included in the non-linked liabilities.
