Unit pricing and cut-off time for applicability of Net Asset Value (NAV)

Our current unit pricing and cut-off time is as per the following extract from the Insurance Regulatory and Development Authority's 'Guidelines for Unit-Linked Life Insurance Products'. These times are subject to change by us at any time with prior approval from the Insurance Regulatory and Development Authority.

10.2 The unit pricing shall be computed based on whether the company is purchasing (appropriation price) or selling (expropriation price) the assets in order to meet the day to day transactions of unit allocations and unit redemptions i.e. the life insurer shall be required to sell/purchase the assets if unit redemptions/allocations exceed unit allocations/redemptions at the valuation date.

10.3 The **Appropriation price** shall apply in a situation when the company is required to purchase the assets to allocate the units at the valuation date as stated in 10.2. This shall be the amount of money that the company should put into the fund in respect of each unit it allocates in order to preserve the interests of the existing policyholders.

10.4 The **Expropriation price** shall apply in a situation when the company is required to sell assets to redeem the units at the valuation date as stated in 10.2. This shall be the amount of money that the company should take out of the fund in respect of each unit it cancels in order to preserve the interests of the continuing policyholders.

10.5. Computation of NAV:

10.5.1 when Appropriation price is applied: The NAV of a Unit Linked Life Insurance Product shall be computed as: Market value of investment held by the fund plus the expenses incurred in the purchase of the assets plus the value of any current assets plus any accrued income net of fund management charges less the value of any current liabilities less provisions, if any. This gives the net asset value of the fund. Dividing by the number of units existing at the valuation date (before any new units are allocated), gives the unit price of the fund under consideration.

10.5.2 When Expropriation price is applied: The NAV of a Unit Linked Life Insurance Product shall be computed as: Market Value of investment held by the fund less the expenses incurred in the sale of the assets plus the value of any current assets plus any accrued income net of fund management charges less the value of any current liabilities less provisions, if any. This gives the net asset value of the fund. Dividing by the number of units existing at the valuation date (before any units are redeemed), gives the unit price of the fund under consideration.

10.6 Uniform cut-off timings for applicability of Net Asset Value:

The allotment of units to the policyholder should be done only after the receipt of premium proceeds as stated below:

10.6.1: Allocations (premium allocations, switch in):

10.6.1.1 In respect of premiums/funds switched received up to 3.00 p.m. by the insurer along with a local cheque or a demand draft payable at par at the place where the premium is received, the closing NAV of the day on which premium is received shall be applicable.

10.6.1.2 In respect of premiums/funds switched received after 3.00 p.m. by the insurer along with a local cheque or a demand draft payable at par at the place where the premium is received, the closing NAV of the next business day shall be applicable.

10.6.1.3 In respect of premiums received with outstation cheques/demand drafts at the place where the premium is received, the closing NAV of the day on which cheques/demand draft is realized shall be applicable.

10.6.2: Redemptions:

10.6.2.1 In respect of valid applications received (e.g. surrender, maturity claim, switch out etc) up to 3.00 p.m. by the insurer, the same day's closing NAV shall be applicable.

10.6.2.2 In respect of valid applications received (e.g. surrender, maturity claim, switch etc) after 3.00 p.m. by the insurer, the closing NAV of the next business day shall be applicable.
