1. Scenario for a Healthy Male Life Assured
2. These assumed rates of return are not guaranteed and they are not the upper or lower limits of what you might get back, as the value of your policy is dependent on a number of factors including future investment performance. Some benefits are guaranteed and some benefits are variable with returns based on the future performance of your insurer carrying on life insurance business. If your policy offers guaranteed benefits then these will be clearly marked “guaranteed” in the illustration table on this page. If your policy offers variable benefits then the illustrations on this page will show two different rates of assumed future investment returns. These assumed rates of return are not guaranteed and they are not the upper or lower limits of what you might get back, as the value of your policy is dependent on a number of factors including future investment performance.
A. Maturity Benefit: Benefits payable at the end of your policy term
At maturity you will receive your Fund Value. Fund Value will be calculated by multiplying balance units in your fund by the then prevailing unit price. Your policy matures at the end of policy term you have chosen. All your risk cover ceases at the end of policy term.

You can also take your fund value at maturity in periodical instalments under settlement option. Please refer Terms and Conditions section for more details.
