L-42- Valuation Basis (Life Insurance) as at end Sep 2011

(a) How the policy data needed for valuation is accessed.

The policy data is extracted from the policy administration system and checked to ensure completeness of data. Additional checks are performed on the data, some of which are listed below.

- The current year's valuation data is reconciled with the previous year's data and the movements during the year. This check is done for number of contracts, sum assured, premium and number of units.
- The movement data is checked against accounting data with regard to benefit payments.
- An extract of the data held in the policy administration systems is compared with the information in the paper administration files.
- Checks are made to ensure that the parameters for each product, such as age, term, premium, etc, are within the minimum and maximum limits for the product.

(b) How the valuation basis are supplied to the system

- An actuarial software package, based on sound actuarial principles, is used to compute the reserves for all material lines of business.
- The valuation basis is supplied to this actuarial software from an external assumptions spreadsheet file, which is updated and independently checked.
- The actuarial software produces an output of the basis used, which is then validated against the approved valuation basis.
- For minor lines of business like annuities, health and group protection contracts the reserves are calculated using Excel and VBA for Excel and the valuation basis is parameterised in the Excel spreadsheet.

(1) Valuation Interest Rate Assumptions

	Minimum	Maximum
(a.1) Life - Participating policies	5.2%	5.2%
(a.2) Life - Non-participating policies	5.2%	5.2%

(a) Individual Business

	Minimum	Maximum	
(a.1) Participating policies	42.0%	96.0%	
(a.2) Non-participating policies	42.0%	180.0%	
(a.3) Annuities	40.0%	40.0%	Expressed as a % of LIC a(96-98)

(a.5) Health insurance	28.0%	44.0%	

(b) Group Business (unit linked)

	120.0%	120.0%
--	--------	--------

(3) Expense Assumptions

The values of future expenses have been determined so as to allow, on prudent assumptions, for either of the following two eventualities:

- 1) all future maintenance expenses on an on-going basis
- 2) the future expenses that are likely to be incurred if the company were to close to new business within 12 months of the valuation date.

It is not the intention of the company's management to close to new business, and the latter eventuality has only been included in the interests of prudence, so as to ensure that policyholders' reasonable expectations can still be met in the unlikely event.

The per policy renewal expense assumption varies between Rs 241 and Rs 1913 for the majority of the individual business.

These renewal expenses vary by product, frequency and premium payment instructions.

The claim expense assumptions for maturities and surrenders for individual contracts is Rs. 669 and for death claims it is the higher of 0.4% of Sum at risk and Rs 669.

The per policy renewal expenses and claim expenses are increased at an inflation rate of 7.5% per annum.

In addition, investment expenses of 0.18% of fund (0.12% for individual unit-linked & group unit-linked) are also reserved for.

(4) Persistency Assumptions

(a) Individual Business (Unit linked)

(a.1) No lapses or surrenders are assumed to occur in the initial policy years when the surrender charges are applicable.

After the completion of such period, the lapse/surrender rate is set at best estimate, adjusted for 20% downside Margin for Adverse Deviations (MAD).

The actual rates range from 4% to 32% based on products and duration in-force since inception.

(a.2) Paid up rates have been set at 100%.

(a.3) The partial withdrawals have been set to 120% of the best estimate rates (implying a MAD of 20%).

The actual rates vary from 1.2% to 6% based on products.

(b) Individual Business (Conventional)

(b.1) No lapses or surrenders are assumed to occur.

L-42- Valuation Basis (Life Insurance) as at end Sep 2011

(5) Bonus Rates

(a) Individual Business

- The future reversionary bonus rates vary between 2% and 5%.
- Reversionary bonuses are assumed to de-escalate for some products, subject to a minimum floor of 1% or any other minimum guarantees applicable.
- Terminal bonuses are set at a policy level as the excess of projected asset share over guaranteed maturity benefits, subject to a minimum of zero.

(6) Policyholder's Reasonable Expectations

- Reversionary bonus rates are subject to a maximum rate of change to reflect policyholder's reasonable expectations - that bonus rates should be changed smoothly, rather than suddenly.
- In those cases where the guaranteed surrender value is greater than the calculated reserve, the reserve is increased to the guaranteed surrender value. This ensures that the mathematical reserves reflect policyholder's reasonable expectations on surrender.
- In product lines where the calculated gross premium reserve is less than the aggregate asset share, the product level reserve is increased to the aggregate asset share. This ensures that the mathematical reserves reflect policyholder's reasonable expectations.

(7) Taxation and Shareholder Transfers

- Taxation (where applicable) of surplus and shareholder transfers have been treated as additional cashflows in calculating the reserves.

(8) Basis of provisions for Incurred But Not Reported (IBNR)

- An IBNR provision has been made to make an allowance for the claims that may have occurred but have not yet been reported, in addition to claims which are expected to occur after the valuation date.
- The reserve for IBNR claims is calculated for each member of each policy as 1 months risk premium/charge.
